Min Min Myo LWIN and Mohd Arif ABDULLAH

A 65-year-old man with a background history of hypertension, coronary artery disease, diabetes mellitus and chronic kidney disease was admitted with bradycardia and hyperkalaemia secondary to medications. His medications included atenolol 25 mg daily, monodiltiazem 200 mg daily, amlodipine 10 mg daily, enteric coated aspirin 100 mg daily, Vasteral 20 mg three times a day, atorvastatin 20 mg nocte and humulin N 10 unit subcutaneously at bed time. On examination, an incidental finding is shown (Panel).

What is the diagnosis?

Answer: refer to page 106
