Rajanna BHARATHI

A 26-year-old lady presented with recurrent right upper quadrant pain with primary infertility. She was treated earlier for vaginal discharge. The endocervical swab culture test proved positive for *Chlamydia*. Hystero-salpingography showed blocked tubes. The diagnostic laparoscopy was undertaken to evaluate tubal status. The laparoscopy finding is as shown above (Panel).

What is the diagnosis?

*Answer: refer to page 107*
